

Instructions for Coding the Sociogram Task

1. I like to **write a number on top of each friend circle** to keep track of which is #1, #2, and so on. (It's easy to lose track!)
2. For consistency, I usually **start with the friend in the top middle** (12 o'clock) and work around clockwise.
3. It is VERY important to use a **clear plastic ruler**. Precision!
4. If the line is between two hash marks (for example, in the middle between 11 and 12 mm), **you can estimate a decimal**, like 11.5.
5. Even the size of the pen stroke can make a difference! **Measure from the outside edges** of the pen strokes.

People's circles are NOT usually circles! Your task is to measure the LONGEST diameter in the circle.

People's circles are often not perfectly closed. If so, again, measure the longest possible diameter.
